Leviathan OneDrive + GitHub Sync Plan - For Tomorrow

1. Organize the OneDrive Folder

[ ] Clean up or merge "One Drive New" vs "OneDrive"

[ ] Ensure your main project lives in:

C:\Users\mikek\OneDrive\Leviathan

[ ] Move files like PDFs, Markdown docs, and extras into:

- /Logbook

- /OneNote

- /docs (optional)

- README.md in root

2. Ensure OneNote is Properly Nested

[ ] Confirm the Leviathan Logbook notebook is inside the Leviathan folder

[ ] Insert important PDFs (like the checklist) as printouts

[ ] Organize pages into sections like:

- Planning

- Experiments

- Ideas

- To-Do

3. Connect OneNote to GitHub

[ ] Create a notebook_link.md file in GitHub that links to your online notebook

[ ] Export another OneNote page (PDF or Markdown) and push to GitHub

[ ] Confirm all content is versioned and clearly organized

Let's pick this up tomorrow and finalize your OneNote to GitHub integration!
